

Nimbus Cloud Solutions Knowledge Base

Products & Services Handbook

A complete reference to Nimbus Cloud Solutions plans, products, and managed services.

1. About Nimbus Cloud Solutions

Nimbus Cloud Solutions is a managed cloud infrastructure provider founded in 2014 and headquartered in Austin, Texas, with regional data centers in Virginia (US-East), Oregon (US-West), Frankfurt (EU-Central), and Singapore (APAC). We provide compute, storage, networking, and a managed application platform to more than 9,000 business customers ranging from early-stage startups to regulated enterprises in finance and healthcare.

Our mission is to give engineering teams enterprise-grade infrastructure without the operational overhead of running it themselves. Every plan includes 24/7 monitoring, automated backups, and access to our support engineers.

What we sell, in one sentence

Three product families: **Nimbus Compute** (virtual machines and containers), **Nimbus Store** (object, block, and database storage), and **Nimbus Platform** (a managed application platform with autoscaling, CI/CD, and observability).

2. Compute Products

Nimbus Compute offers virtual machines (VMs), a managed Kubernetes service, and serverless functions. All compute resources are billed per second with a 60-second minimum and can be reserved for 1-year or 3-year terms at a discount.

2.1 Virtual machine families

Family | Best for | vCPU range | Memory range | On-demand price

General (g-series) | Web apps, APIs, dev/test | 1 – 64 | 1 – 256 GB | from \$0.0085 / vCPU-hr

Compute (c-series) | Batch, encoding, simulation | 2 – 96 | 4 – 192 GB | from \$0.0110 / vCPU-hr

Memory (m-series) | Databases, caches, analytics | 2 – 128 | 16 – 1024 GB | from \$0.0140 / vCPU-hr

GPU (x-series) | ML training, inference, render | 8 – 96 | 64 – 1152 GB | from \$1.95 / GPU-hr

2.2 Managed Kubernetes (Nimbus K8s)

A fully managed control plane with a 99.95% uptime SLA. The control plane is free; you pay only for the worker nodes. Includes automated version upgrades, integrated load balancing, and one-click cluster autoscaling between a minimum and maximum node count that you define.

2.3 Serverless Functions (Nimbus Fn)

Event-driven functions that scale to zero. Billed per million invocations plus GB-seconds of execution. The first 1 million invocations each month are included free on all paid plans.

3. Storage Products

- **Object Store** — S3-compatible object storage with 11 nines of durability, lifecycle rules, and versioning. Priced per GB-month with no charge for ingress.
- **Block Volumes** — high-performance SSD volumes attachable to VMs, with snapshots and online resizing.
- **Managed Databases** — fully managed PostgreSQL, MySQL, and Redis with automated failover, point-in-time recovery, and daily backups retained for 7 days (30 days on Enterprise).

4. Nimbus Platform (PaaS)

Nimbus Platform lets teams deploy directly from a Git repository. Push to a branch and the platform builds, tests, and deploys the application, provisioning networking, TLS certificates, and autoscaling automatically. It includes built-in observability (metrics, logs, traces) and supports preview environments for every pull request.

5. Plan Tiers

Products are consumed under one of four account plans. Higher tiers add support speed, compliance features, and discounts — they do not gate which products you can use.

Plan | Monthly platform fee | Support response | Key inclusions

Starter | \$0 | Email, next business day | Pay-as-you-go, community support, 1 project

Growth | \$99 | Chat, < 4 business hours | Usage discounts, 5 projects, daily backups

Business | \$499 | 24/7 chat + phone, < 1 hour | 99.95% SLA, SSO, audit logs, 25 projects

Enterprise | Custom | 24/7, < 15 min, named TAM | 99.99% SLA, HIPAA/PCI, private networking, unlimited projects

6. Add-on Services

- **Managed Migration** — our engineers move your existing workloads from another cloud or on-prem; scoped as a fixed-fee project.
- **Dedicated Support Engineer** — a named engineer embedded with your team (Enterprise add-on).
- **Premium Backup** — cross-region backup replication with 90-day retention.
- **DDoS Shield Plus** — always-on layer 3/4/7 mitigation with traffic scrubbing.

Availability of every product and region is listed live on the status page; planned product changes are announced 30 days in advance for paid plans.

Service Operations & Customer Processes

How onboarding, support, incidents, SLAs, and change management work at Nimbus.

1. Onboarding a New Account

After sign-up, every new account goes through a guided onboarding flow. Starter and Growth customers self-onboard in the console; Business and Enterprise customers are assigned an onboarding specialist who runs a kickoff call within two business days.

- Verify email and enable multi-factor authentication.
- Create your first project and invite team members with roles (Owner, Admin, Developer, Billing, Read-only).
- Connect a payment method or, for Enterprise, confirm the invoicing agreement.
- Optional: schedule an architecture review with a solutions engineer (free on Business and above).

Most accounts are fully provisioned within minutes. Enterprise private-networking and compliance setup typically completes within 5 business days.

2. Support Channels & Hours

Plan | Channels | Hours | First-response target

Starter | Email, community forum | Business hours (CT) | Next business day

Growth | Email, live chat | Business hours (CT) | < 4 business hours

Business | Chat, phone, email | 24 / 7 | < 1 hour

Enterprise | Chat, phone, email, Slack Connect | 24 / 7 | < 15 minutes (P1)

Support is reached through the in-console help widget or the customer portal. For security and account-ownership issues, customers must verify identity before changes are made.

3. Incident Severity & Response

When you open a ticket, you select a severity. We may adjust severity based on customer impact and communicate the change.

Severity | Definition | Example | Update cadence

P1 — Critical | Production down, no workaround | Region-wide outage affecting your live service | Every 30 min

P2 — High | Major feature impaired | Database failover not completing | Every 2 hours

P3 — Normal | Minor issue, workaround exists | Slow console page | 1 business day

P4 — Request | Question or change request | How do I rotate an API key? | 2 business days

4. Service-Level Agreements (SLA)

SLAs define our uptime commitment and the service credits you receive if we miss it. Credits are issued against your next invoice and are the exclusive remedy for downtime.

Monthly uptime | Service credit

99.95% – 99.99% | 10% of affected service fee

99.00% – 99.95% | 25% of affected service fee

Below 99.00% | 50% of affected service fee

To claim a credit, open a P3 ticket within 30 days of the incident referencing the affected resources. Scheduled maintenance announced at least 7 days ahead is excluded from SLA calculations.

5. Change & Maintenance Windows

Routine maintenance is performed during regional low-traffic windows and announced on the status page. Customers can subscribe to status notifications by email, SMS, or webhook. Emergency security patches may be applied without the standard notice period, with notification sent as soon as practical.

6. Data Handling & Offboarding

Customers own their data at all times. On cancellation, data remains accessible in read-only mode for 30 days, after which it is permanently deleted. Customers can export all data at any time via the console or API. A signed data-processing addendum (DPA) is available for all paid plans.

Account closure steps

- Export any data you wish to retain (Object Store, database dumps, configuration).
- Cancel active subscriptions and reserved instances from Billing → Subscriptions.
- Submit the closure request; final invoice is generated for usage to date.
- Account enters a 30-day grace period before permanent deletion.

Billing, Pricing & Finance Guide

Invoicing, payment terms, discounts, refunds, and tax for Nimbus customers.

1. Billing Model

Nimbus bills monthly in arrears for metered usage (compute, storage, bandwidth) plus any fixed platform fee billed in advance. The billing cycle runs from the 1st to the last day of each calendar month (UTC). Invoices are generated on the 1st business day of the following month.

2. Accepted Payment Methods

- Credit and debit cards (Visa, Mastercard, American Express) — charged automatically on the invoice date.
- ACH / SEPA direct debit — available on Growth and above.
- Wire transfer / invoicing with net terms — Business and Enterprise only, subject to credit approval.
- Prepaid credits — purchase a balance in advance that is drawn down by usage; unused credits expire 12 months after purchase.

3. Payment Terms

Plan | Default terms | Late handling

Starter / Growth | Auto-charge on invoice date | Retry over 7 days, then services suspended
Business | Net 15 (invoicing) or auto-charge | Reminder at day 10, suspension risk at day 20
Enterprise | Net 30 (negotiable) | Handled by your account manager

Accounts suspended for non-payment retain data during a 30-day grace period and can be reinstated immediately on payment. A 1.5% monthly late fee may apply to overdue invoiced balances where permitted by law.

4. Discounts & Cost Savings

- **Committed-use discounts** — reserve compute for 1 year (up to 32% off) or 3 years (up to 57% off).
- **Volume tiers** — automatic per-GB and per-vCPU price breaks as monthly usage grows.
- **Annual prepay** — pay the platform fee annually for roughly two months free.
- **Startup program** — qualifying early-stage companies receive up to \$25,000 in credits over 12 months.
- **Nonprofit / education** — discounted rates with valid documentation.

5. Refunds & Credits

Metered usage is non-refundable because resources were actually consumed. The following exceptions apply:

- **SLA credits** — issued automatically or on claim when uptime targets are missed (see Operations guide).
- **Billing errors** — if you are charged incorrectly, contact billing support within 60 days for a full correction.
- **Annual prepay cancellation** — pro-rated refund of the unused fixed fee, less any discount already realized.
- **Goodwill credits** — support may issue discretionary credits to resolve a service issue.

Refunds are returned to the original payment method within 5–10 business days, or applied as account credit if you prefer.

6. Taxes & Invoicing Details

Prices are exclusive of tax. Applicable sales tax, VAT, or GST is added based on your billing address and tax status. Customers with a valid VAT ID or tax-exemption certificate can add it under Billing → Tax settings, and it will be reflected on future invoices. Invoices include an itemized usage breakdown per project and can be downloaded as PDF or CSV.

7. Cost Management Tools

- **Budgets & alerts** — set a monthly budget and receive alerts at 50%, 80%, and 100%.
- **Cost Explorer** — break down spend by project, product, and tag.
- **Forecasting** — projected month-end spend based on current usage trends.

- **Spend caps** — optional hard caps that pause non-critical resources to prevent overruns.

Customer Service FAQ

Answers to the questions Nimbus clients and support agents ask most often.

Account & Access

Q: How do I reset my password?

A: From the login page choose 'Forgot password' and follow the email link. If multi-factor authentication is enabled and you have lost your device, contact support to verify identity and reset MFA.

Q: How do I add a teammate to my account?

A: Go to Project → Members → Invite, enter their email, and choose a role (Owner, Admin, Developer, Billing, or Read-only). They receive an email invitation that expires in 7 days.

Q: Can I have a single sign-on (SSO) login?

A: Yes. SSO via SAML or OIDC is available on the Business and Enterprise plans and is configured under Organization → Security.

Q: Who is the account owner and how do I transfer ownership?

A: The owner is the person who created the account or the most recent transferee. Ownership can be transferred under Organization → Members by the current owner; the action requires email confirmation.

Products & Usage

Q: How quickly can I launch a virtual machine?

A: A general-purpose VM typically boots within 30–60 seconds of creation. GPU instances may take slightly longer depending on regional capacity.

Q: What is your uptime guarantee?

A: Managed Kubernetes and core compute carry a 99.95% monthly SLA on paid plans, rising to 99.99% on Enterprise. Missing the target entitles you to service credits.

Q: Do you charge for data coming into Nimbus?

A: No. Ingress (data uploaded to Nimbus) is free. Egress (data transferred out) is billed per GB with a monthly free allowance on each plan.

Q: Can I move my workloads from another cloud provider?

A: Yes. Our Managed Migration service handles the move as a fixed-fee project, and self-service migration guides are available in the documentation.

Billing

Q: When am I charged?

A: Metered usage is billed monthly in arrears; invoices are issued on the first business day of the following month and auto-charged unless you are on invoiced net terms.

Q: Why was my card declined and my service suspended?

A: After a failed charge we retry over 7 days and email reminders. If payment still fails, services are suspended but your data is retained for a 30-day grace period and restored immediately on payment.

Q: How do I get a refund for a billing mistake?

A: Contact billing support within 60 days of the invoice. Confirmed errors are corrected in full and refunded to your original payment method within 5–10 business days.

Q: How can I reduce my bill?

A: Use committed-use discounts for steady workloads, set budgets and spend caps, right-size instances with Cost Explorer recommendations, and consider annual prepay for the platform fee.

Q: Do your prices include tax?

A: No. Sales tax, VAT, or GST is added based on your billing address. Add a valid VAT ID or exemption certificate under Billing → Tax settings to adjust future invoices.

Support & Incidents

Q: My production service is down — what do I do?

A: Open a P1 ticket through the in-console help widget or phone (Business and Enterprise). Check the status page first to see whether it is a known platform incident; if so, subscribe for updates.

Q: How fast will support respond?

A: First-response targets are next business day (Starter), under 4 business hours (Growth), under 1 hour (Business), and under 15 minutes for P1 issues (Enterprise).

Q: How do I claim an SLA credit?

A: Open a normal-priority ticket within 30 days of the incident, listing the affected resources. Credits are applied to your next invoice.

Security & Compliance

Q: Is Nimbus compliant with HIPAA or PCI?

A: HIPAA and PCI-DSS aligned environments are available on the Enterprise plan with a signed agreement. SOC 2 Type II and ISO 27001 reports are available under NDA for all paid plans.

Q: Where is my data stored?

A: In the region you select when creating each resource. Data is not moved between regions unless you enable cross-region backup or replication.

Q: What happens to my data if I cancel?

A: Your data stays accessible in read-only mode for 30 days after cancellation, then is permanently deleted. You can export everything at any time before then.
